EDUCATION

- Baruch College, City University of New York, GPA: 3.8/4.0** **New York, New York**
- Bachelor of Science in Business Administration *Expected Graduation Date: Dec 2024*
 - Waseda University, School of Commerce Exchange Program in Tokyo, Japan
- New York University, Tandon School of Engineering** **New York, New York**
- Bachelor of Science in Computer Science *September 2019 - June 2020*

SKILLS

- Programming:** Proficient: Python, Java, React.js, Swift, JavaScript, HTML/CSS | Familiar: SQL, C++
- Software:** Git, Node.js, React Native, React Redux Tailwind, Firebase, AWS, Django
- Soft:** Project Management, Leadership, Public Speaking, Teamwork, Self-Motivated

EXPERIENCE

- Lotus** **New York, New York**
- Full-stack Software Engineer* *October 2023 - Current*
- Developed and deployed a Generative AI chatbot that learns and responds based on each individual note.
 - Leveraged React for front-end implementation and developed backend user authentication and AWS database using Firebase, resulting in 70% faster access times and intuitive user flow.
- Ryukai Tempest** **(Remote) London**
- Full-stack Software Engineer* *October 2021 - April 2022*
- Developed the Front-end website application using React, HTML, CSS, Javascript and Solidity.
 - Integrated a database that had to receive over 5,000 users while ensuring every 3,000 users the ability to sign and purchase the project on the blockchain safely.
- PIXIO LIMITED** **Hong Kong**
- Mobile Software Engineer Intern* *July 2019 - August 2019*
- Played a key role in development of organization's databases that won Apple app store's featured game award.
 - Integrated support capabilities that allowed for 70% faster access time and better customer user communication.

PROJECTS

- ChatTranslate | React, FireBase** *May 2023 - June 2024*
- Created a chat messaging bot using Chatgpt API to converse with users in any language they want, allowing for instant translation and practice with desired language. Each individual was provided with their own user page through login and database to remember previous history.
- Resume Parser | React, Tailwind, Firebase** *January 2023 - February 2023*
- Employed a web app to create a resume parser where users were able to submit their resumes that allowed admins to search for specific keywords in said resume, within a Firebase database. It would then show which users, with their respective names and their resume as a pop up, so admins could use it to identify which users qualify for their specific requirement.
- Gacha Task | React Native, XCode** *July 2022 - September 2022*
- Utilized React Native and XCode to create an app that manages a task list, and then randomly generates a visual of the task for the user to complete. It included local data load and save for users to repeat those tasks easily.
